

Case 37 (November 29 2007): [N Engl J Med. 357\(22\):2286-2297](#)

Demographic: Male, 47 years, America North, General speciality

Clinical features extracted from the case and entered into the query box:

rales
new third heart sound
high jugular venous pressure
peripheral edema
tachycardia
right bundle branch block
ST segment elevation
hypotensive
elevated troponin

Synonyms used by Isabel for the above query:

Rales
Peripheral edema
Tachycardia
Hypotension
Elevated troponin
Right bundle branch block

STOP !

Before you read further you might want to construct your own:

- Complete differential diagnosis
- Final diagnosis

In the following section you will find:

- The differential diagnosis constructed by the MGH panel
- The final diagnosis of the case
- Which of the MGH panel differential diagnoses did Isabel contain
- Did Isabel suggest the Final diagnosis

Differential Diagnoses considered by the MGH panel:

Primary Cardiac Amyloidosis
Early Decline in Cardiac Function after Transplantation
Transplant Rejection - humoral
Myocardial Infarction

Final Diagnosis of the case according to NEJM:

Acute myocardial infarction of donor heart
Pericardial amyloid deposition

Mild acute cellular rejection – if you would like to read up on transplant complications, please consult our Search Knowledge component – under the Read up a textbook option.

Differential Diagnoses of the case as given by Isabel:

Myocardial infarction – under Cardiac disorders heading
Amyloidosis – under Rheumatic disorders heading

Was the final diagnosis given by Isabel:

Yes, under Cardiac disorders heading

Isabel Differential:

isabel
