

Case 2 (January 15 2009): [N Engl J Med. 360\(3\):281-290](#)

Demographic: Male, 25 yrs, America North, General speciality

Clinical features extracted from the case and entered into the query

box:

hypotension
chills
fever
obtunded
vomiting
incontinent
prolonged capillary refill time
swollen painful erythematous hand
petechiae on legs

Synonyms used by Isabel for the above query:

hypotension
petechiae
vomiting
fever
chills
obtunded

STOP !

Before you read further you might want to construct your own:

- Complete differential diagnosis
- Final diagnosis

In the following section you will find:

- The differential diagnosis constructed by the MGH panel
- The final diagnosis of the case
- Which of the MGH panel differential diagnoses did Isabel contain
- Did Isabel suggest the Final diagnosis

Differential Diagnoses considered by the MGH panel:

Streptococcal Toxic Shock Syndrome

Final Diagnosis of the case according to NEJM:

Necrotizing fasciitis with resulting Septic shock

Differential Diagnoses of the case as given by Isabel:

Streptococcal Toxic Shock Syndrome – under Infectious diseases heading

Was the final diagnosis given by Isabel:

Yes, Necrotizing fasciitis under Dermatology heading

Isabel Differential:
